Multinomial Naive Bayes - tfidf_l1

May 3, 2024

1 Initialization

Connect to Google Drive:

```
[]: # from google.colab import drive
# drive.mount('/content/drive')
# %cd '/content/drive/MyDrive/GitHub/emotion-dectection-from-text'
```

Preparing necessary packages (may need to add more):

Select dataset:

```
[]: X_train = X_train_tfidf_L1
X_test = X_test_tfidf_L1
```

2 Basic training

We define and train a model with default hyperparameter, which is alpha = 1:

```
[]: nb_model = MultinomialNB()
nb_model.fit(X_train, y_train)
```

[]: MultinomialNB()

Evaluate model using preset function:

```
[]: evaluate_model(nb_model, X_train, X_test, y_train, y_test, u_sinclude_training=True)
```

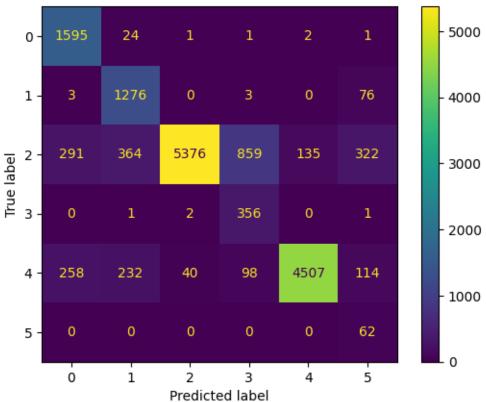

Score of on train are:

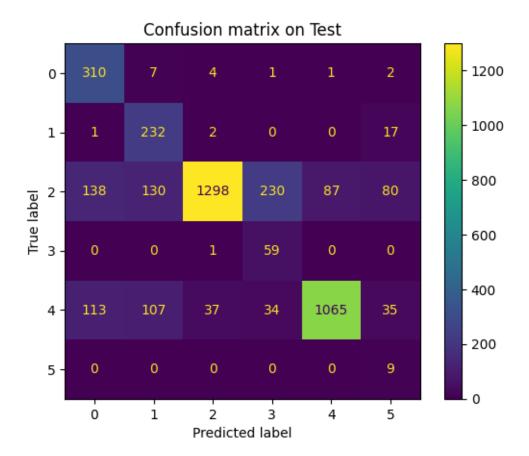

- Accuracy score: 0.82 - Micro F1 score: 0.82 - Macro F1 score: 0.67

Score of on test are:

- Accuracy score: 0.74 - Micro F1 score: 0.74 - Macro F1 score: 0.56

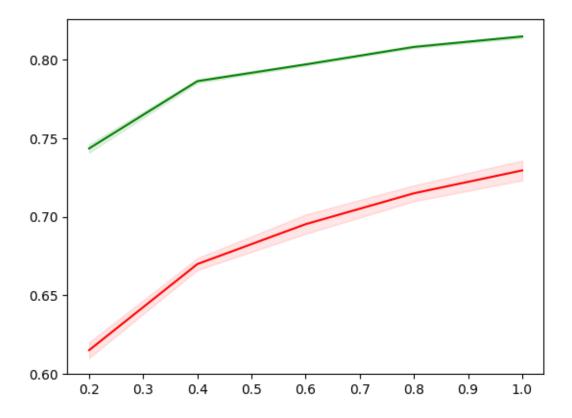

Confusion matrix on Train

Draw the learning curve using preset function:

[]: draw_learning_curve(nb_model, X_train, y_train)

3 Model selection

3.1 α parameter

First we try a hyperparameter range:

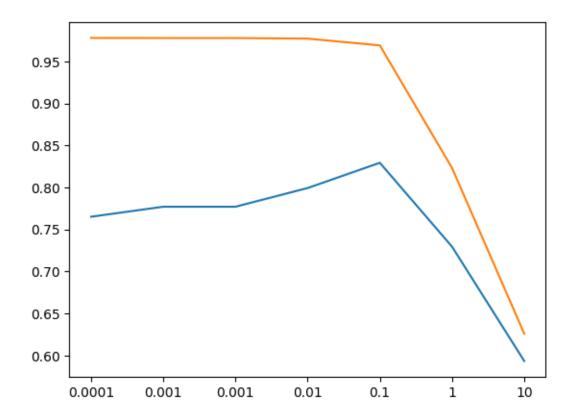

```
[]: # Setting the hyperparameter range
K = [0.0001, 0.001, 0.001, 0.1, 1, 10]
```

```
[]: # Define a list in order to store accuracy points
    cvs_list = list()
    trs_list = list()

for k in K:
    # Define model for each K
    nb_model = MultinomialNB(alpha=k)
    nb_model.fit(X_train, y_train)

# Calculate score of cross validation
    train_score = accuracy_score(y_train, nb_model.predict(X_train))
    cv_score = np.mean(cross_val_score(nb_model, X_train, y_train, cv=5, u)
    on_jobs=8))
```

```
trs_list.append(train_score)
       cvs_list.append(cv_score)
[]: # Print the result
     print(K)
     print(trs_list)
     print(cvs_list)
     # Draw the plot
     fig = sns.lineplot(x=list(range(len(K))), y=cvs_list)
     fig = sns.lineplot(x=list(range(len(K))), y=trs_list)
     fig.set_xticks(range(len(K)))
     fig.set_xticklabels(K)
    [0.0001, 0.001, 0.001, 0.01, 0.1, 1, 10]
    [0.9780625, 0.9779375, 0.9779375, 0.97725, 0.9691875, 0.82325, 0.6259375]
    [0.7651249999999999, 0.7770625, 0.7770625, 0.7993125, 0.829375, 0.7295,
    0.593375]
[]: [Text(0, 0, '0.0001'),
     Text(1, 0, '0.001'),
     Text(2, 0, '0.001'),
     Text(3, 0, '0.01'),
     Text(4, 0, '0.1'),
     Text(5, 0, '1'),
     Text(6, 0, '10')]
```

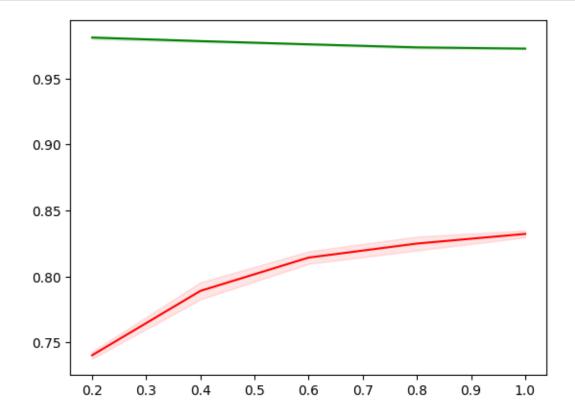

Iteration 1: From the result of above section, we can see the good value of α is near the value 0.1.

```
[]: # Print the result
     print(K)
     print(trs_list)
     print(cvs_list)
     # Draw the plot
     fig = sns.lineplot(x=list(range(len(K))), y=cvs_list)
     fig = sns.lineplot(x=list(range(len(K))), y=trs_list)
     fig.set_xticks(range(len(K)))
     fig.set_xticklabels(K)
    [0.05, 0.075, 0.1, 0.125, 0.15, 0.175, 0.2]
    [0.97375, 0.971375, 0.9691875, 0.9654375, 0.9610625, 0.957375, 0.952375]
    [0.8300625, 0.832249999999999, 0.829375, 0.8269375, 0.8220625,
    0.8167500000000001, 0.8110625]
[]: [Text(0, 0, '0.05'),
     Text(1, 0, '0.075'),
      Text(2, 0, '0.1'),
     Text(3, 0, '0.125'),
     Text(4, 0, '0.15'),
      Text(5, 0, '0.175'),
      Text(6, 0, '0.2')]
           0.98
           0.96
           0.94
           0.92
           0.90
           0.88
           0.86
           0.84
           0.82
                  0.05
                           0.075
                                      0.1
                                              0.125
                                                         0.15
                                                                  0.175
                                                                             0.2
```

As the result, we can claim that $\alpha = 0.075$ give a model with good accuracy and avoid overfitting. We will test the model again in test set.

```
[]: best_nb_model = MultinomialNB(alpha=0.075)
```

```
[]: draw_learning_curve(best_nb_model, X_train, y_train)
```

```
[]: best_nb_model.fit(X_train, y_train)
evaluate_model(best_nb_model, X_train, X_test, y_train, y_test,

include_training=True)
```

Score of on train are:

- Accuracy score: 0.97

- Micro F1 score: 0.97

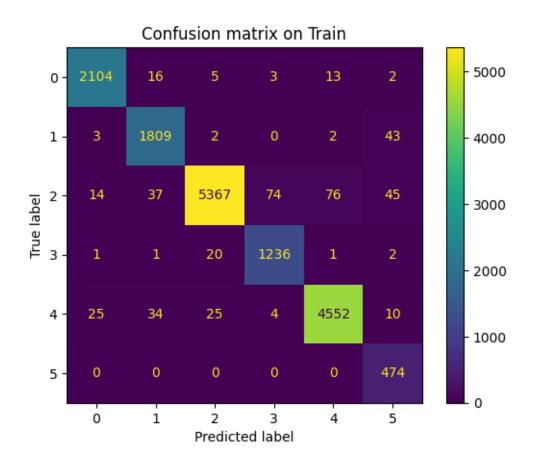

- Macro F1 score: 0.96

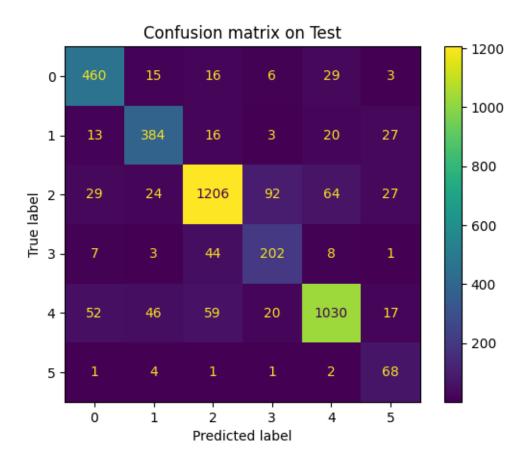

Score of on test are:

- Accuracy score: 0.84

- Micro F1 score: 0.84

- Macro F1 score: 0.78

4 Export model

```
[]: directory = "data/models/nb/"
   dump(best_nb_model, directory + "best_nb_tfidf_l1_model.joblib")
```

[]: ['data/models/nb/best_nb_tfidf_l1_model.joblib']
